

Logistics Services

- Freight services
- Ports/terminal operators
- Customs services, shipping services
- Warehouses
- Post & express delivery services
- Consulting services
- Repair and maintenance, packaging and transportation security
- Pallets and cargo safety by strap, strip, rope, chain and etc.
- Instruments of weight measurement (weighbridge)
- Light & heavy vehicle

Logistics equipment

- Container/tank & bulk services
- Transportation/industrial vehicles
- Factory/warehousing automation
- Material handling equipment & automatic equipment
- Loading & emptying the consignment equipment
- Ramps & equipment
- Loader, crane, terminal tractor & accessories
- Heavy transportation, Fuel logistics
- Consultation & project management, infrastructure providers
- Industrial facilities & real estate management
- Multipurpose freight forwarding services

Ama Company is ready to hold seminars, workshops and specialized meetings during this exhibition. So please contact the secretariat for more information.

Warehousing Equipment & Material Transportation

- Categorizing, movable categorizing systems
- Goods transfer systems
- Warehousing equipment and furniture
- Packaging, pallets, materials and goods storage containers and conveyor systems
- Cranes, warehousing vehicles & machinery
- Process control system for storage and distribution
- Weighing systems, automation and warehouse control
- Storage structure, technique & equipment
- Prefabricated metal structures
- Warehousing management systems, distribution & loading
- Environmentally friendly warehouse (green) & packaging solutions

Distribution

- Companies, channels, vehicles, distribution and loading facilities
- Trading companies
- Land, rail, marine, aerial and combined transportation companies
- Transportation organizations

International Exhibition of
Logistics & Transportation
(Marine, Land, Rail, Aerial, Combined)
Related Equipment & Services

Introduction

Logistics and transportation play an important role in economic activities of countries, as well as sustainable development, especially in developing countries. Due to the economic development and world trade and the efforts of countries to increase access to world markets, transportation has a special status as one of the key issues in the development of communications and political, cultural and commercial cooperation. In this regard, Iran has a strategic position as the most important trade route between Asia and Europe along the North–South Transport Corridor. Therefore with governmental support, we can play a significant role to facilitate international activities and provide good conditions for the cooperation of logistics companies with hubs of economic and commercial activities in the world.

North-South Transport Corridor

North-South Transport Corridor is one of the major transit routes in Central Asia, and the countries on this path develop and equip their ports, roads, terminals and railways by forming a union and concluding cooperation agreements in a comprehensive competition, which comparing to traditional routes, it is 40% shorter in terms of distance and time and is 30% cheaper in terms of cost. Considering this important fact and prosperity of the regional markets and the need for increasing commercial capacity, improving the infrastructure and increasing the level of this corridor, it still requires more investment and effort.

Founders and members

The North-South International Transport Corridor was established on September 12, 2000 in St. Petersburg by three countries, Iran, Russia and India, in order to promote transport cooperation between the members. This corridor connects the Indian Ocean and the Persian Gulf through Iran to the Caspian Sea, then through Russia to St. Petersburg and northern Europe. Now this corridor is expanded with the acceptance of ten new members: Azerbaijan, Armenia, Kazakhstan, Kyrgyzstan, Tajikistan, Turkey, Ukraine, Belarus, Oman and Syria, as well as Bulgaria as an observer member of the corridor. The Islamic Republic of Iran is also designated as the trustworthy country, which is responsible for informing the contracting parties of accession of other countries to this agreement or the resignation of each of the parties.

Bandar Abbas

The city of Bandar Abbas, with the former name of Bandar Gombroon with an area of 70697 km² is the capital of Hormozgan province. Transportation and transit capacity through the use of four types of transportation network (marine, land, rail and aerial) has made Bandar Abbas an economic gateway for the country. Currently, Bandar Abbas is the largest port in Iran, the center of major economic and commercial activities as well as the gateway of North–South Transport Corridor. This city is located in the northern part of the Persian Gulf, at the intersection between the Persian Gulf and Gulf of Oman, and plays an important role in the country's exports and imports. The major marine and infrastructure installations of the country, such as Shahid Rajaei Port, Bandar Abbas Oil Refining company, Almahdi Aluminum Company, Hormozgan Aluminum Company, Persian Gulf Shipbuilding, Hormozgan Steel and Cement are located in Bandar Abbas. Having valuable ports due to special geographical position, as a point of reliance for Bandar Abbas to transport goods and capital in various forms, has brought major economic and commercial consequences to Hormozgan province and has made Bandar Abbas a special area for economic destination of mines, metals, shipbuilding, export and import of goods. There is freight transportation between Hormozgan ports and Iranian islands in Persian Gulf and other countries and goods are imported or exported through these ports, particularly Bandar Abbas, Shahid Rajaei and Shahid Bahonar.

The objectives of the exhibition

- Introduction of logistics and transportation industry capabilities in knowledge generation and production in line with Resistant Economy
- Identification of the potential of logistics and supply chain management, transportation industry, equipment and related services, and appropriate utilization of existing capacity and facilitating productivity, employment and entrepreneurship
- Establishing and improving the export approach of non-oil products to other countries, especially the eastern and northern neighbors through the corridor
- Bringing together the network of logistics activists and presenting the latest achievements and technology of the world in the transportation industry, equipment and related services
- Extensive use of advertisement to increase reputation and introduction of participants with the opportunity to conclude contracts, development of economic activities of domestic and foreign participants
- Active and dynamic information through holding conferences, meetings and seminars related to the field of logistics, supply chain and transportation industry and business network
- Dynamic engagement and collaboration with prestigious universities and reference organizations and knowledge-based institutions at the national and international levels
- Helping the development and establishment of a business network in Iran and other countries of the region
